THE SUNDAY LEAGUE / CLUB PLAYBOOK

ONE CLUB. EVERY BALL.

Feature overview • web app + iOS / Android PWA

01 Scoring and match day

- Live limited-overs scoring: two teams, toss winner, bat/bowl call, ground, 1-50 overs, ball outcomes, wickets and extras.
- Scorecards show innings totals, batters, bowlers, strike rate and economy. Scorer can undo. Spectators refresh live scores roughly every seven seconds.
- Club statistics and rankings: weekly or all-time runs, wickets, fours, sixes and match participation.

02 Friends, profiles and Sunday

- Player sign-up and login, batting hand, bowling style, preferred role, jersey number, short bio and individual performance overview.
- Sunday fixtures, attendance RSVP, suggested balanced squads, toss before play, group share actions and notifications.
- Organizers use a separate private activation code; verified opt-in emails require a configured email delivery provider.

03 JARVIS + Firebase

- JARVIS uses your server-side Gemini key and responds only to cricket-related topics. It can discuss technique, verified statistics and suggested match-day planning.
- Firebase web configuration powers optional, user-consented Analytics. MongoDB is the source of accounts and score data. This is not Firebase Auth or Firestore.
- JARVIS does not actually book grounds, text a player or independently change official scoring records.

DEPLOYMENT / HONEST STATUS

GETTING MATCH-READY

Technical requirements • security • mobile install

04 Works on iOS and Android

- This is an installable Progressive Web App (PWA), not a separate Apple App Store / Google Play native package.
- iPhone: open the HTTPS site in Safari, tap Share, then Add to Home Screen. Android: open in Chrome and choose Install app.
- Scores, sign-in, match scheduling and AI require internet. App shell offers an offline fallback, without caching private scores or API responses.

05 Hosting configuration

- Deploy the Node.js Express server to Vercel or another compatible host. Configure MONGODB_URI, MONGODB_DB, SESSION_SECRET, ADMIN_EMAIL and ADMIN_SETUP_CODE as server secrets.
- Set PUBLIC_ORIGIN to the final HTTPS URL. Add GEMINI_API_KEY for JARVIS; Resend credentials for verified, opt-in email reminders; CRON_SECRET for scheduling.
- GitHub Actions Sunday scheduler additionally needs APP_BASE_URL and CRON_SECRET secrets. A cron workflow does not send WhatsApp messages automatically.

06 Quality and limits

- Six cricket scoring unit checks pass. Real-device acceptance, a full end-to-end match, account security and configured email/AI integration still require hosted tests.
- Full native push notifications, password-reset emails, video highlights, DLS and super overs are not yet implemented.
- Madhuban Cricket original PNG is preserved exactly at 1024 x 1024. Smaller home-screen icons are separately generated lossless files.

07 Club links & dedication

- Thanks to every cricketer, coach, parent and childhood teammate who helped us fall in love with the game.
